DETAILED ACTION***Drawings***

The drawings are objected to under 37 CFR 1.83(a) because they fail to show the dispersing of rock dust into the air ventilation passages and the ventilation air feed means communicating with the interior of the tank means as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3749

Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 recites the limitation "said tank means" in line 7. There is insufficient antecedent basis for this limitation in the claim. Claim 2 recites the limitation "said dryer" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim(s) 1, 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parenti (4,869,737) in view of Tchernev (5,251,458). Parenti discloses all of the limitations of the claim(s) except for maintaining the feed air at a humidity level sufficiently low to prevent rock dust in the tank means from agglomerating. Tchernev discloses the presence of a maintaining the feed air at a low humidity level via an air-conditioning unit. See abstract. Hence, one skilled in the art would find it obvious to modify the system of Parenti to include the maintaining the feed air at a low humidity level of Tchernev for the purpose of increased safety and comfort. Regarding claim 4, Parenti in view of Tchernev discloses the claimed invention except for the fresh air stream being pressurized from about 75psi to about 1000psi. It would have been obvious to one having ordinary skill in the art at the time the invention was made to fresh air stream being pressurized from about 75psi to about 1000psi, since it has been held that

where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.
